Post-processing: Minimum Match 0% Listing first 45 summaries

Database:

Statistics:

HIV-NA8 1:H\_PRI 2:H\_UNA 3:H\_VIR

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Mean 11.993; Variance 3.454; scale 3.472

Jackson Foundation Research Laboratory Rockville, Maryland. Twenty-one full length gp100 coding sequences from eight African countries (Djibouti, Gabon, Kenya, Senegal, Somalia, Uganda, Zaire, and Zambia) were sequenced and analyzed with thirty-two previously published full-length gp160 env sequences. Sequences DJ258, DJ259, K124, SE365, SM145, UG266, UG268, UG274, VI191, and VI525 have corresponding gag sequences published by Louwagie et. al. in AIDS 7, 769-780 (1993) and in the 1993 compendium. This sequence clusters with C subtype env sequences. See also accession numbers L22939-L22957 and L23064.	3. and Burke,D.                                                                                               These sequences were kindly provided prior to publication by Dr. Joost Louwagie of the Henry M. Jackson Foundation Research Laborator; Rockville, Maryland. Twenty-one full length gp160 coding sequences from eight African countries (Dj1bouti, Gabon, Kenya, Senegal, Somalla, Uganda, Zaire, and Zambia) were sequenced and analyzed with thirty-two previously published full-length gp160 env sequences. Sequences DJ258, DJ259, K124, SE355, SM145, UG256, UG258, UG274,
   Sequences DJ258, DJ259, K124, SEJDD, DJ259, VIII91, and VII925 have corresponding gag sequences published by ronwagie et. al. in AIDS 7, 769-780 (1993) and in the 1993 compensional et. al. in AIDS 7, 769-780 (1993) and in the 1993 compensional et. al. in AIDS 7, 769-780 (1993) and in the 1993 compensional et. al. in AIDS 7, 769-780 (1993) and in the 1993 compensional et. al. in AIDS 7, 769-780 (1993) and in the 1993 compensional et. al. in AIDS 7, 769-780 (1993) and in the 1993 compensional et. al. in AIDS 7, 769-780 (1993) and in the 1993 compensional et. al. in AIDS 7, 769-780 (1993) and in the 1993 compensional et. al. in AIDS 7, 769-780 (1993) and in the 1993 compensional et. al. in AIDS 7, 769-780 (1993) and in the 1993 compensional et. al. in AIDS 7, 769-780 (1993) and in the 1993 compensional et. al. in AIDS 7, 769-780 (1993) and in the 1993 compensional et. al. in AIDS 7, 769-780 (1993) and in the 1993 compensional et. al. in AIDS 7, 769-780 (1993) and in the 1993 compensional et. al. in AIDS 7, 769-780 (1993) and in the 1993 compensional et. al. in AIDS 7, 769-780 (1993) and in the 1993 compensional et. al. in AIDS 7, 769-780 (1993) and in the 1993 compensional et. al. in AIDS 7, 769-780 (1993) and in the 1993 compensional etc.

This sample has been taken from patient F, one of the seven
patients (A,M,L,F,C,V,R), in the study(1). All patients had acute,
self-limited symptomatic illness with measurable viremia followed
by seroconversion. Patient F was infected by patient M via sexual
transmission. The authors report that the sequences in this study
are found to be uniformly macrophage-tropic and nonsyncytium-
inducing. The sequence for sample F clone 10, along with other
patient F clones 1-9, 11, and 12, is shown in alignment following t
printed text entry. These gag sequences cluster with HIV-1 B subty
sequences. See also L21224-L21591 and L24161, L24162.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This sample has been taken from patient M, one of the seven patients (A,M,L,F,C,V,R), in the study(1). All patients had acute, self-limited symptomatic illness with measurable viremia followed by seroconversion. Patient M was a chronically infected male who subsequently transmitted the virus to patient F. The authors report that the sequences in this study are found to be uniformly macrophage-tropic and non-syncytium-inducing. The sequence for sample M clone 2, along with other patient M clones 1, 3-9, 11, and 12, is shown in alignment following the printed text entry. These gag sequences cluster with HIV-1 B subtype sequences. See also L212

K02013 M64186-190 M64194-198 M64203-223 acquired immune deficiency syndrome; complete genome; env gene; gag gene; long terminal repeat; pol gene; polyprotein; provirus; reverse transcriptase; trans-activator. Human immunodeficiency virus type 1 (HIV-1), isolate LAI proviral DNA clone lambda-J19 (Infectious clone available; formerly HIVBRU).

An infectious clone of this virus has been constructed by Keith Peden, NIH-NIAID, Bethesda, 301-496-6730. HIVNL43 is also an infectious clone having for its 3' half a clone of the LAI isolate. The tat sequence for the L20 clone is available (see 1989: I-A-54 and following pages in this release drawing upon PCR-generated sequence sets [3]).

All LAV BRU and IIID viral samples are now believed to have been derived from this source, LAI [3]; viruses from the person BRU are now designated HIVJB.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             full staff_review 2 (bases 1712 to 1749; correction of [1] in gag-pol cds) Alizon, M., Wain-Hobson, S., Montagnier, L. and Sonigo, P. An infectious clone of this virus has been constructed by Keith Peden, Molecular Biology and Genetics, Johns Hopkins University School of Medicine, Baltimore, MD 21205 (301) 955-3652. HIVNL43 is also an infectious clone having for its 3' half a clone of the BRU isolate. The tat

This sample is part of a set of sequences generated through the WHO Global Programme on AIDS. The virus was derived from an asymptomatic individual, from Rwanda, whose route of infection is thought to be due to heterosexual contact. The blood sample was taken in 1992. This env sequence clusters with HIV-1 A subtype sequences. The full name of this sequence is HIV192RW016WHO.01_GlgCR; it was presented in alignments in an abbreviated form in the April 94 Human Retroviruses and AIDS compendium update as A2RW016W.01_GlgCR.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                TATTAGAACAATTTGATAATGCTGT 567
                                                                                          NIAID/NIH DAIDS Variation Program.

This sample is part of a set of sequences generated through the NIAID/NIH DAIDS HIV variation program. The virus was derived from an asymptomatic individual, from Baltimore, U.S., whose route of infection is thought to be due to parenteral IVDU contact. The blood sample was taken in 1992. This env sequence clusters with HIV-1 B subtype sequences. The full name of this sequence is HIV92US712DAIBA.01d1isED; it was presented in alignments in an abbreviated form in the April 94 Human Retro. AIDS compendium update as BAUS712D.01dilgED.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This sample is part of a set of sequences generated through the WHO Global Programme on AIDS. The virus was derived from an asymptomatic individual, from Rwanda, whose route of infection is thought to be due to heterosexual contact. The blood sample was taken in 1992. This env sequence clusters with HIV-1 A subtype sequences. The full name of this sequence is HIV192RWOIGHHO.D19GCR; it was presented in alignments in an abbreviated form in the April 94 Human Retroviruses and AIDS compendium update as A2RWOIGW.O1_D1GCR.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             811

V3 loops of HIV-1 specimens from pregnant women in Malawi uniformly
lack a potential N-linked glycosylation site
AIDS Res. Hum. Retroviruses 9, 705-706, 1993
RD full staff_review
Partial HIV-1 envelope sequences obtained from PCR amplified
PBMC-cell DNA of infected pregnant women enrolled in a study
of risk factors for HIV-1 in Blantyre, Malawi. An alignment of
the sequences in this set (accession numbers L15721-L15735),
follows the printed text entry. All of the sequences in this
study belong to the env subtype C.

Study belong to the env subtype C.
                                                                                                                                                                                                                                                             /sequenced_mol="DNA"

polynucleotide(s) and proteins derived from Staphylococcus aureus stored on computer readable medium and used in the production of anti-S.aureus vaccines
Claim 1; Page 1287-1288; 3271pp; English.
This sequence represents one of 5191 Staphylococcus aureus DNA sequences of the invention. The DNA sequences are recorded on a computer readable medium, preferably selected from a floppy or hard disk, random access memory (RAM), read-only memory (ROM) or CD-ROM. Homology searches using

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       the S.aureus DNA sequences allows putative functions to be assigned so CC that protein-encoding or regulatory regions of commercial, therapeutic or industrial importance can be obtained. Specifically, sequences which are Likely to encode antigens have been identifically, sequences which are be used in a vaccine composition against S.aureus infection. The CC polypeptides can also be used in a kit for the immunodetection of S.aureus in a sample. S.aureus is implicated in numerous human diseases, including cellulitis, eyelid infections, food poisoning, osteomyelitis, Skin and surgical wound infections, scalded skin syndrome, toxic shock Syndrome, etc. Organisms transformed with the DNA sequences can be used for recombinant production of the polypeptides. The new DNA sequences (and their fragments) are useful as primers or probes for isolating computer readable medium.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 containing an expression system comprising the Murc gene can be used for the recombinant production of the polypeptide. Agonists or the Murc polypeptide are used to treat conditions requiring increased activity or expression of the polypeptide. Antagonists, inhibitory nucleic acid or competitive polypeptide are useful for inhibiting the polypeptide e.g. the dictorial (especially s. aureus) infections. They are also useful against the Helicobacter pylori infections and related cancers, ulcers and gastritis. The antibacterial agents are useful to treat in-dwelling devices for infection prevention or generally as wound treatments to prevent adhesion of bacteria to matrix proteins. The Murc polypeptide is also useful for antibodies; to identify monogen for vaccines. The Murc gene sequences are useful in antisense/ribozyme therapeutics; to detect mutant Murc gene; for chromosomal mapping; to determine bacterial serotype; and for genetic sequence (Murc ORR) of the Murc gene.

Sequence (Murc ORR) of the Murc gene.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                    aureus UDP-N-acetylmuramate:L-alanine ligase (MurC polypeptide). Host C cell containing an expression system comprising the MurC gene can be used for the recombinant production of the polypeptide. Agonists or the MurC copypeptide are used to treat conditions requiring increased activity or c expression of the polypeptide. Antagonists, inhibitory nucleic acid or CC competitive polypeptide are useful for inhibiting the polypeptide e.g. CC bacterial (especially S. aureus) infections. They are also useful against CC Helicobacter pylori infections and related cancers, ulcers and gastritis. CC The antibacterial agents are useful to treat in dwelling devices for cinfection prevention or generally as wound treatments to prevent adhesion CC of bacteria to matrix proteins. The MurC polypeptide is also useful for CC diagnosing or prognosing a (susceptibility to) disease, for raising CC antibodies; to identify modulators or specific receptors; in rational CC useful in antisense/ribozyme therapeutics; to detect mutant MurC gene; constraint of the constraint of the constraint of the constraint of the constraint of the constraint of the constraint of the constraint of the constraint of the constraint of the constraint of the constraint of the constraint of the constraint of the constraint of the constraint of the constraint of the constraint of the constraint of the constraint of the constraint of the constraint of the constraint of the constraint of the constraint of the constraint of the constraint of the constraint of the constraint of the constraint of the constraint of the constraint of the constraint of the constraint of the constraint of the constraint of the constraint of the constraint of the constraint of the constraint of the constraint of the constraint of the constraint of the constraint of the constraint of the constraint of the constraint of the constraint of the constraint of the constraint of the constraint of the constraint of the constraint of the constraint of the constraint of the constraint of the constr

          New nucleic acid sequences from Staphylococcus aureus WCHU29 - useful in vaccines and for treatment of bacterial infections of e.g. respiratory tract and central nervous system Claim 1; Rage 146; 390pp; English.

This sequence encodes a Staphylococcus aureus protein of unknown function, and represents a DNA Sequence of the invention. The DNA sequences were isolated from Staphylococcus aureus WCHU29 (NCIMB 40771). Host cells containing the DNA sequences are used to produce polypeptides or fragments. The proteins are used in the treatment of disease, for inducing an immune response by administering them, to

Conditions which may be treated include bacterial infections, especially respiratory, cardiac, gastrointestinal, central nervous, eye, kidney, urinary tract, skin, bones and joints. The proteins can also be used to identify antimicrobial compounds which are broad spectrum antibiotics, especially useful in the treatment of H. pylori infection.

The computer-based system can identify fragments of the Enterococcus faecalis genome with commercial importance. The products can be used to detect the presence of Enterococcus faecalis in samples. They can also be used for diagnosing Enterococcal infection in an animal and monitoring progression of disease, and for identifying agents which can be used to modular the growth or pathogenicity of Enterococcus faecalis, or another related organism, in vivo or in vitro. In particular the polypeptides encoded by the Enterococcus faecalis nucleotide sequences can be used in vaccines to prevent or attenuate an Enterococcal

A computer readable medium has been developed which has recorded on it 982 nucleotide sequences isolated from the Enterococcus faecalis genome
 WO9818930-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WPI; 99-045171/04.

New isolated Enterococcus faecalis polynucleotides and polypeptides - used to develop products for the detection of Enterococcus and for use in vaccines for prevention or attenuation of Enterococcus
                                                                                                                                                                                                                                                                                  433
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   infection.
                                                                                                                                                                                                                                                                                                               673 cttat

The present sequence encodes a protein from Streptococcus pneumoniae. The nucleic acid sequence encoding the Streptococcus pneumoniae protein can be useful in vaccines for inducing protective antibodies against Streptococcus pneumoniae, for treatment or prevention of infection e.g. pneumonia, otitis media or meningitis. Probes based on the nucleic acid applification methods), also for isolating Streptococcus genes or their allelic variants. The protein can be used similarly to detect specific antibodies in standard immunoassays, especially for diagnosing or monitoring infections. Antibodies which bind the protein are used to detect corresponding antigens, to purify the protein and for passive immunisation (optionally coupled to a toxin). Vaccines are administered.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 on it, or a representative fragment or a sequence at least 95% identical to SEQ ID NO: 1 to 391. The nucleotide sequences depicted in SEQ ID NO: 1 to 391 (V52134 to V52524) are genomic fragments from Streptococcus pneumoniae. The present invention also describes an isolated nucleic acid molecule encoding a homologue of any of the fragments of the S. pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    S. pneumoniae genome of commercial importance, or expression modulating fragments of the S. pneumoniae genome. Products from the present invention can be used in diagnosis kits and assays, and pharmaceutical

                                                                                                                                                                                                                         Oligonucleotide probe MK14-A consists of nucleotides 5-95 of (O51735). It hybridized to all spp. of mycobacteria tested, cross reacted to a few non-mycobacterial spp. The probe may be useful as an initial screen for mycobacterial infection. See also Q51735-45 and Q51747-59.

Claim 1; Page 151-152; 18Lpp; English.

The sequence is that of a Streptococcal polypeptide coding region. The polypeptide can potentially be used for the diagnosis and prevention of bacterial infections, especially SP infection.

It may be used for the treatment of diseases such as otitis media, conjunctivitis, pneumonia, bacteremia, meningitis, sinusitis, pleural empyema, endocarditis or infection of the cerebrosphnal fluid.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Disclosure; p; English.

Random point mutations were introduced into the alpha fragment of E.coli beta-galactosidase. The wild type sequence was obtained as a single stranded template and an oligonucleotide was hybridised to it to generate a popn of DNA molecules which terminate at all consible nucleotide positions within a specified region. The variable 3' ends generated in this way are used as primers for reverse transcriptase. Nucleotides are misincorporated by the transcriptase and the molecules are completed to forms that can be amplified and then expressed in a suitable host-vector system. The sequence covers all 176 difft base substitutions, most of which see also P80575.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match
                                                                                                                                                                                                                                                                                                                                                                                  Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim 3; Page 14; 23pp; English.
Claim 3; Page 14; 23pp; English.
Oligonucleotide probe MK14-A consists of nucleotides 5-95 of (Q51735). It hybridized to all spp. of mycobacteria tested, cross reacted to a few non-mycobacterial spp. The probe may be useful as an initial screen for mycobacterial infection. See also Q51735-45 and Q51747-59.

Generic DNA sequence to generate a random TSAR-9 petide library.
TSAR; totally synthetic affinity reagent; synthetic; binding dome
effector domain; concateneated heterofunctional protein; linker;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  single stranded template and an oligonucleotide was hybridised to it to generate a popn of DNA molecules which terminate at all possible nucleotide positions within a specified region. The variable 3' ends generated in this way are used as primers for reverse transcriptase. Nucleotides are misincorporated by the transcriptase and the molecules are completed to forms that can be amplified and them expressed in a suitable host-vector system. The sequence covers all 176 difft base substitutions, most of which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Shank DD, Spears WPI; 93-378844/48.
